
COMP 523: User Manual

10th December 2023

OVERVIEW

Ego Green is a mobile app that is for those who are interested in monitoring their environmental practices and contribution to sustainability. On its initial iteration, the app will monitor daily sustainability practices by making estimates on carbon footprint – based on input data. Through the use of user-inputted receipt data from grocery stores and Open AI, users will receive a carbon emission output so that they can get a better understanding of their environmental impact and start taking steps to change it. With this app, we aim to give users relevant information and the ability to increase their sustainability practices so that they can create a more sustainable world for all.

DASHBOARD

After registering you will first see the dashboard. This is where you can see things related to your account such as:

- Overall progress
- Total number of receipts scanned
- Total carbon emissions
- Earned badges

You will also be able to update your account information and change your password.

RECEIPTS

- To start scanning receipts, click the Total Receipts box in your dashboard. This will take you to the receipts page.
- If you have not scanned any receipts, you will see the message “No receipts found”. To start scanning receipts, click the plus (+) button.
- You will then be directed to the receipt scanning page where you can either scan with camera, or enter the receipt data manually.
- If you have already scanned some receipts, you will see them appear on the Receipts page. You can click on each receipt and see their corresponding information.

BADGES
