ABOUT

ROBERT MOOG (1934-2005)

Robert "Bob" Moog was an American pioneer in electronic music. Bob collaborated with the greatest minds of his time and inspired many others, counting among his colleagues early synth pioneers. Moogfest began in 2004, marking the 50-year anniversary of Bob's first homemade Theremin.

It started as a one-night party in New York City for Moog friends and musical collaborators before growing organically into a semiannual celebration of Bob Moog's work and his community of synth enthusiasts. In 2010, Moogfest moved to Asheville and adopted a multi-venue festival format for electronic music, including a wide range of artists influenced by the analog synthesizer. By 2014, the popularity of electronic music in America

and the global explosion of festivals created a different context for Moogfest: no longer was the music festival a sufficient platform for experimentation and conversation. To complement the nighttime performances, technology conference was added to the program, bridging the divide between engineering and artistry. Today, Moogfest reimagines the typical music festival and tech conference by taking the best of both formats. Though the festival is grounded in North Carolina, it is a wholly international community that convenes at Moogfest annually.

Peanut Butter Wolf is an Los Angeles-based DJ and founder of independent record label, Stones Throw Records. As a high school student, he began spinning and making hip hop beats in 1984 and later launched his label in 1996.

PEANUT BUTTER WOLF
